# DRIPSAFE

Dripsafe is a product based on Phosphoric acid which removes alkali/salts from the dripline and while cleaning the dripline, it keeps the drip irrigation system clean and effective.

## USEFULNESS

- Dripsafe cleans lime (calcium/magnesium carbonate), minerals (Ferric oxide) and other alkali elements available in water.
- Dripsafe keeps the main line, branch line, dripline and the dripper of drip irrigation system clean.
- By cleaning the salts deposited at nozzle, it maintains regular supply of water.
- Dripsafe reduces the pH of water.

## BENEFITS

- Dripsafe Increases the life of drip irrigation system.
- Dripsafe helps in making the drip irrigation system more effective through which the water quality and its usefulness get ensured.
- Dripsafe helps in keeping uniform water moisture in root expansion.
- Dripsafe is a Chlorine free product.
- Dripsafe increases the porosity of the soil.

## DOSAGE

Make a mixture of 3- 5 kg Dripsafe with 50 litre clean water and use it through drip irrigation system in a period of 4-6 weeks. The number of dosage and the dose quantity has to be decided based upon water TDS.

**CAUTION** : Dripsafe is acidic in nature, so don't let it contact with your body and eyes. While using dripsafe wear protective gloves, glasses and shoes. While making the mixture always add dripsafe into the water (Don't add water into dripsafe)
