CONVERTS FARM WASTE INTO ORGANIC MANURE
SUITABLE FOR AGRICULTURE

NUTRIBHUMI

Consortium of Beneficial Microorganisms

Nutribhumi is a Consortium of Microorganism cultures developed for Aerobic decomposition of Organic waste.

BENEFITS

- Nutribhumi decomposes the crop waste into Organic Manure in 4-6 weeks.
- It is rich in Beneficial Microbes which help in faster Decomposition.
- The Manure produced is in fully digested form which is free from Weed seeds and Pathogens.
- Preserves plant nutrients while decomposition.
- Safe to handle and easy to apply.

APPLICATION INFORMATION

- If the waste is wet and soft, sprinkle Nutribhumi directly on the waste and mix it thoroughly.
- For the dry waste, prepare a slurry of 1kg Nutribhumi in 30 Litres water and spray on the waste.
- Before usage, Nutribhumi slurry should be kept overnight, so that beneficial microorganisms get activated and the slurry is ready to use.
- After application, treated waste should be arranged in heap of size 4 Meter Length x 2 Meter Width x 2 Meter Height.
- Another application process is, form layers of waste (2-3 Layers) and apply Nutribhumi directly.
- For proper aeration keep turning waste every 10 days.
- Heap internal temperature should reach 60-70 degrees Celsius during first week of the process.
- If the temperature is not achieved, add half quantity dose of Nutribhumi during turning.
- During the process, around 40% moisture should be maintained.
- To have proper digestion process in monsoon, the treatment should be done under shade.

DIRECTIONS FOR USE

1. Prepare Nutribhumi Slurry 
2. Mix the slurry well into crop waste 
3. Form a heap & measure internal temperature
4. Turn the heap once in 10 days 
5. Organic manure is ready in 4-6 weeks

APPLICATION DOSAGE : 1kg Nutribhumi for 1MT of Organic waste
